FAQ'S HEATER HOTTER

How does Heater Hotter work?

Heater Hotter helps reduce surface tension, and essentially lubricates the system, allowing coolant to flow more efficiently, in turn transferring heat into the heater core more quickly.

Will Heater Hotter work with different coolants?

Yes, Heater Hotter works with all water based cooling systems.

Do I need to mix it?

No, simply pour Heater Hotter into your coolant system when it is NOT under pressure.

How many bottles do I need per system?

One 16 ounce bottle is enough for most regularly-sized domestic V8 engine cooling systems.

What's the right mix ratio for Heater Hotter?

Mix 1 oz. of Heater Hotter for every quart.

Can I leave Heater Hotter in my cooling system in cold months?

Yes. Heater Hotter does not need to be drained for the warm summer months. Because Heater Hotter transfers heat into the coolant more efficiently, your vehicle will actually run cooler coolant temps in the hot summer months.
