## FAQ'S RADIATOR RELIEF

### **How does Radiator Relief work?**

Radiator Relief helps reduce surface tension, and essentially lubricates the system, allowing coolant to flow more efficiently.

### **Will Radiator Relief work with different coolants?**

Yes, Radiator Relief works with all water based cooling systems.

### **Do I need to mix it?**

No, simply pour Radiator Relief into your coolant system when it is NOT under pressure.

### **How many bottles do I need per system?**

One 16 ounce bottle is enough for most regularly-sized domestic V8 engine cooling systems.

### **What's the right mix ratio for Radiator Relief?**

Mix 1 oz. of Radiator relief for every quart.

### **Can I leave Radiator Relief in my cooling system in cold months?**

Yes. Radiator Relief does not need to be drained for the cold winter months. Because Radiator Relief transfers heat into the coolant more efficiently, your vehicle will actually warm up more quickly in cold weather.
