## FAQ'S STAINLESS STEEL LOCKING TIES

### **How do I keep the wrap from coming undone?**

DEI Stainless Steel Locking Ties are designed to keep your exhaust wrap securely in place and with a finished look. Our Locking Tie Tool makes installing them quick and easy. Stainless steel hose clamps or lock wire will also work.

### **How much heat can Stainless Steel Locking Ties withstand?**

The high grade 304 stainless steel construction can withstand up to 2500°F.

### **How strong are Stainless Steel Locking Ties?**

Each tie has a tensile strength in excess of 100 lbs. Using multiple ties in close succession compounds the overall strength.

### **Are Stainless Steel Locking Ties reusable?**

We don't recommend reusing these ties. Prying the closure open to release the tie would permanently reduce its biting strength.

### **How do I get the ties tight?**

We recommend using our Locking Tie tool to get ties tight. Alternatively, you can use needle nose pliers and a flat blade screw driver to get them tight. Hold the locking mechanism in place with the screw driver, and pull the end of the tie that goes through the locking mechanism with the pliers.
