FAQ'S UNDER CARPET LITE

Does Under Carpet Lite block heat and sound?

Yes. Under Carpet Lite is the workhorse on interior insulation. It blocks up to 85% of heat coming through the metal panels and absorbs sounds from bouncing around once in the interior. Picture getting into a luxury vehicle, closing the door and everything sounds muffled. Almost like you have a head cold. That is what Under Carpet lite does for sound.

Do I use Under Carpet Lite on top of carpet padding?

Under Carpet Lite replaces carpet padding or jute. Carpet padding and jute are very inefficient in controlling heat and sound. Under Carpet Lite is engineered to control both heat and sound. Use Under Carpet Lite instead of jute or carpet padding.

What side of Under Carpet Lite faces up?

Either side facing up will work, but traditionally, the grey, darker side faces up when installing.

Do I need to install anything before Under Carpet Lite?

Installing Boom Mat damping material before you install Under Carpet Lite is the ultimate way to create cool, quiet, comfortable interiors. It controls noise, vibration, and heat in a simple two step installation.

Do I need to glue down or use an adhesive to hold down Under Carpet Lite?

In overhead surfaces like under headliners and vertical surfaces like rear bulkheads, yes you should use an adhesive like Our Hi Temp Adhesive Spray (10492) or our double sided installation transfer tape (50207) to install. On floors and flat surfaces, use the spray adhesive or transfer tape to tack it in and hold it in place. No need to use adhesive on the entire material if on flat surface.

How easy is it to cut Under Carpet Lite?

You can use a heavy duty scissors or utility knife to cut Under Carpet Lite to shape.

Can I use Under Carpet Lite under headliners?

Yes. Under Carpet Lite is a perfect lite-weight insulation and sound control for under headliners. It will eliminate hot roofs and heat soak into interiors.
