

Frequently Asked Questions

DEI Cool Cover™ Air Tube Cover Kit

Why should I use an Air Tube Cover Kit?

Our Air Tube Cover Kit will help keep your cold air intake tube from getting hot. With the Air Tube Cover reflecting heat away from the air tube this will allow cooler air to be introduced into the intake for a denser air/fuel charge which results in more horsepower!

What is this product made of?

The Air Tube Cover Kit is made of heat treated fiberglass with a reflective coating.

I have a custom colored cold air intake that matches my car. I like to show off the vehicle at car shows. Should I still use this product?

One of the best aspects of this product is that it is easily installed and removed with its Velcro system. Just remove the cover at the car shows and reinstall when you are getting ready to leave.
