

Frequently Asked Questions

DEI Fire Tape™

What is fire Tape and where should I use it?

Fire Tape can withstand 475° F continuous. It is a self bonding, self curing, water proof material. It is 1" wide and comes in a 36" roll.

Fire Tape is a great product for sealing ends of thermal barriers. We provide a 16" section with our Fire Sleeve to finish the ends. This will give a more appealing look but will also seal the ends so the heat cannot equalize under the barrier.

Fire Tape has many other uses. It may be a good idea to keep a roll of this in your car for emergencies. You can use it to hold broken parts in place, tighten up a loose wire harness so it will not drag on the road, or you can use it to wrap around leaking coolant hose until you can get to a shop and have it replaced.
