

## Frequently Asked Questions

### **CryO<sup>2</sup>™ Intercooler Sprayer**

#### ***Where is the Intercooler Sprayer placed in the CryO2™ system?***

It must be the very last item in the CryO2 system because the CO2 is sprayed directly onto the intercooler. The gasses actually enter the atmosphere at this point.

#### ***How does this unit mount to the intercooler?***

The unit uses Stainless Steel Zip-Ties which go through the fins of the intercooler to hold the unit in place. Stainless steel will never rot or rust.

#### ***Can I use multiple Intercooler Sprayers?***

Yes, but it would require the use of a "Y" fitting, splitting the feed into two lines. Extra Stainless Steel hosing will be required.

#### ***What style and sizes are available?***

There are 2 styles and 3 different sizes. You can choose either a top mount or a front mount style. The "mount-style" is determined by where the 1/8" NPT threads are placed on the intercooler sprayer. You can choose the top mount or front mount style on the 16" x 5" or 8" x 4" intercooler sprayers. The larger 19" x 9" intercooler sprayer is only available with the front mount style configuration.
