

Frequently Asked Questions

DEI Intercooler Water Sprayer Kit™

Why should I spray water on my intercooler?

Spraying water on an intercooler could produce a twenty degree F drop in temperatures. By using this product with our CryO² system, it will drop the temperatures even lower. The lower the intake charge the denser the air is. This means that more power can be gained.

Product highlights

The Water Sprayer Kit comes with a two quart reservoir, mounting hardware, water hose, sprayer nozzles, push button switch, and installation instructions. It is easy to install and fun to use. If using in a cold climate, make sure to empty the system for winter or put in environmentally safe water additives to prevent freezing.
